

由 KiOii 整理。（KiOii makes this note.）

Chapter 1. Getting Started

1.1 Writing a Simple C++ Program

Chapter 1. Getting Started

1.1 Writing a Simple C++ Program

Function

- *define: **ReturnType** **Function-Name** (**Parameter-List**) {**Body**}*
- *main-function: `int _cdecl main (int argc1, char *argv[]2, char *argv[]3) {return 0x0;}`*

Type

- *define: the contents of a data element、operation that are on those data*
- *say: **v** has type **T**⁴*

1. 命令行参数的数量(arg count) [↗](#)

2. 命令行参数数组 [↗](#)

3. 环境参数数组 [↗](#)

4. 如果一个名为v的变量的类型是T，我们称“v具有类型T” [↗](#)
